

GAEC NEWSLETTER

ALL YOU NEED TO KNOW ABOUT SCIENCE & LIFE AT ONE PLACE!!!

VOL. 2017, NO. 1

JANUARY 2017

Welcome to all Staff– Director General

I am glad to welcome all staff of GAEC back from the Christmas break. The beginning of the year is a period of newness and clean slates. A chance to do things differently and with purpose. This is the time to close the page on 2016 through sober reflections whilst resolving to accomplish set targets for 2017, no matter the constraints that bedevil the Commission.

“Your potentials are potent enough to propel you into prosperity”

-Apt. Vinny Max Bani

The best New Year resolution is to change our dreams and wishes into plans, focus on creating specific actions to achieve desired results which would contribute to realizing the Commission’s strategic targets within the framework of the Corporate Strategic Plan (2017-21).

I also implore the National Nuclear Research Institute (NNRI) to focus on hydro-isotope techniques to help reduce by half, the 13million people suffering from deprivation of access to clean drinking water (the State of the nation’s address, 2016).

The Biotechnology and Nuclear Agriculture Research Institute (BNARI) has over the past years made Christmas an enjoyable one, by constantly providing us with healthy delicious chicken. We would love to see all year round production of birds as well as diversification in the production to include layers and day old chicks.

According to The Africa report, Ghana records 16,000 cancer cases annually, of which 1,000 are childhood cases. I charge the Radiological and Medical Sciences Research Institute (RAMSRI) to channel all efforts to help reduce this statistic drastically through its medical applications of isotopic techniques this year.

The Commission looks forward to using nuclear power to augment the base load in producing sustainable energy for the citizenry. The Nuclear Power Institute (NPI) should therefore rise up to the task.

Once again, you're all welcome back to work and I wish you a productive 2017.
